

NYTE Vu scope™

The Nyte Vu Scope™ accessory can convert any rifle scope into a total night vision scope with a viewing distance up to 300 feet. The specially designed camera looks down the the scope; the video image is then displayed onto the Nyte Vu™ goggles. Because the camera is looking through the scope, there is no need to shoulder the weapon and can be used for shooting around corners. The quick detach rail system allows the weapon to be converted with in seconds, no longer requiring a special night vision scope or dedicated weapon to have it.
